

Product Requirements Document (PRD)

Provision Store Stock & Sales Management System (Localhost POS + Inventory)

1. Product Overview

Product Name (Working Title)

Possible names: F mart

2. Product Vision

A simple, fast, offline-first stock and sales management system for provision stores and mini

3. Target Users

Primary Users

Shop Owner (Admin)

The business owner with full access.

Shop Attendant (Cashier)

Handles sales only.

4. User Roles & Permissions

A. Shop Owner / Admin

Can:

- Add products
- Edit products
- Restock inventory
- View cost price
- Set selling price
- View profits
- View analytics dashboard

- Generate reports
- Manage attendants
- Access all sales history
- Export PDF/Excel reports
- Configure system settings

Cannot:

- Be restricted by attendants

B. Shop Attendant / Cashier

Can:

- Search products
- Add products to cart
- Checkout sales
- Print receipt
- View selling price only
- Process returns (optional with approval)
- View own sales history

Cannot:

- See cost price
- Edit inventory
- Restock products
- Delete sales
- View profits
- Access analytics dashboard

5. Core Features

MODULE 1 — Authentication & Security

Features

- Login screen
- Role-based access
- Password protection
- Session timeout
- Activity logging
- PIN login for attendants
- Owner master password override

MODULE 2 — Product Management

Product Fields

Each product should have:

Field	Description
Product Name	e.g. Milo 500g
SKU/Product Code	Unique code
Category	Drinks, Snacks, Rice etc
Cost Price	Hidden from attendants
Selling Price	Visible to cashier
Quantity in Stock	Current stock
Minimum Stock Threshold	e.g. 10
Expiry Date	Optional
Product Image	Optional

Product Features

- Add product
- Edit product
- Delete/archive product
- Search products
- Filter by category
- Barcode scanning support

MODULE 3 — Inventory / Stock Management

Restocking Flow

Owner:

- Opens inventory
- Selects product

Inputs:

- quantity added
- cost price

- selling price
- Saves restock

System automatically:

- updates stock quantity,
- recalculates inventory value,
- logs restock history.

Stock Alerts

Alert Levels

Stock Quantity	Alert
20	“Low Stock”
10	“Critical Stock”
0	“Out of Stock”

Smart Inventory Features

- Expiry alerts
- Dead stock alerts
- “No sales in 60 days”
- Fast-moving product detection
- Automatic stock deduction after sales
- Inventory adjustment for damaged goods
- Stock audit mode

MODULE 4 — POS (Point of Sale)

This is the “shop attendant interface.”

POS Flow

- Search/select item
- Add to cart
- Modify quantity
- View total
- Accept payment
- Print receipt
- Complete sale

POS Features

Cart System

- Add/remove items
- Quantity adjustment
- Discount support
- Customer notes
- Payment Types
 - ◆ Cash
 - ◆ Mobile Money
 - ◆ Split payment

Receipt

Should contain:

- Store name
- Items purchased
- Qty
- Unit price
- Total
- Cashier name
- Date/time
- Payment method

MODULE 5 — Sales Management

Features

- Daily sales history
- Sales search
- Receipt reprint
- Refund/return handling
- Void sale (owner only)

Reports

Daily

- Total sales
- Profit
- Expenses
- Number of transactions
- Weekly/Monthly
- Sales trends
- Best-selling products
- Worst-selling products

MODULE 6 — Dashboard & Analytics

Owner Dashboard

Widgets

- Today's sales
- Total profit
- Total stock value
- Low stock products
- Top-selling products
- Recent transactions
- Monthly revenue graph

Insights Engine

System should answer:

- Which products sell fastest?
- Which products generate most profit?
- Which products rarely move?
- Which attendant sells most?
- What time sales peak?

MODULE 7 — Export & Printing

Export Formats

- PDF
- Excel
- CSV

Export Types

- Daily sales
- Product inventory
- Profit report
- Attendant sales
- Low stock report

MODULE 8 — Notifications & Alerts

Alerts

- Low stock
- Out of stock
- Suspicious inventory changes

MODULE 9 — Audit & Tracking

System Logs

Track:

- Who restocked
- Who edited prices
- Who deleted products
- Who processed refunds

6. Suggested Technical Architecture

Recommended Stack

Frontend

- React.js
- Tailwind CSS

Backend

- Laravel

Database

- MySQL

8. Suggested Database Tables

Core Tables

Users

- Id
- Name
- Role
- Password

Products

- Id
- Name
- Sku
- Category
- cost_price
- selling_price
- stock_qty

Sales

- Id
- cashier_id
- Total
- payment_method
- timestamp

Sale_Items

- sale_id
- product_id
- Quantity
- Price

Stock_History

- product_id
- quantity_added
- old_stock
- new_stock
- restocked_by

G. WhatsApp Receipt Sharing

- Send receipt PDF
- Send daily report

H. Customer Credit/Debt Tracking

Features:

- “Mama Ama owes GHS 120”
- payment tracking
- debt reports

10. UI/UX Recommendations

Design Principles

- BIG buttons
- Fast workflow
- Minimal typing
- Dark mode optional

POS Layout

Left Side

- Product grid/search
- Right Side
- Cart
- Total
- Checkout button
- Exactly like supermarket POS systems.

13. Non-Functional Requirements

Performance

- POS checkout < 2 seconds

Reliability

- System works offline

Security

- Password hashing
- Role-based access

Usability

- Trainable within 30 mins

This project should prioritize:

- Speed
- simplicity,
- offline reliability,
- and cashier usability.
